Conclusión

El desarrollo del proyecto VetTurno permitió implementar una solución integral para la gestión de citas veterinarias mediante una arquitectura basada en Spring Boot. Durante la construcción de la aplicación se integraron tecnologías como MySQL, JPA/Hibernate, JWT, Spring Security y Swagger, garantizando un sistema seguro, organizado y escalable.

Asimismo, se implementaron funcionalidades para la administración de propietarios, mascotas, veterinarios y citas, incorporando autenticación, autorización por roles (ADMIN y USER), validaciones de negocio y documentación de la API. Las pruebas realizadas demostraron el correcto funcionamiento de los procesos desarrollados y el cumplimiento de los requisitos establecidos en la guía del taller.

En conclusión, el proyecto permitió aplicar de manera práctica los conceptos de desarrollo backend profesional con Java y Spring Boot, fortaleciendo las competencias en el diseño de APIs REST seguras, la persistencia de datos y la implementación de buenas prácticas de desarrollo de software.
